*Your Mobile Expectations* Olafur Eliasson 2008 As part of its BMW H2R research project, Studio Olafur Eliasson is preparing a dense publication comprising extensive visual material; excerpts from two seminars held in 2006/07; and conversations between Olafur Eliasson and a number of distinguished thinkers, such as architect and artist Yona Friedman, urban theorist Bart Lootsma, and Head of Design BMW Christopher Bangle. In the research project, Eliasson raises questions of formgiving and materiality, mobility, temporality, movement, and renewable energy. The aim is not so much to examine the car as object, as to integrate the vehicle in a complex set of social, historical, political, and economic relations. In 2005 a BMW H2R hydrogen-powered vehicle was delivered to Studio Olafur Eliasson and then stripped bare of its outer shell. To create a new skin several form studies have been carried out in a temporary geodesic dome, constructed in the yard of the studio. The final surface of the car consists of layers of ice, frozen

around two intricate nets, mirrored plates and light. The aoeClimate cara can only exist in a microclimate with a temperature of minus 6 degrees Celsius or below.

*Driveline Systems of Ground Vehicles* Alexandr F. Andreev 2010-01-29 "With this book, Prof. Dr. Vantsevich brings a tremendous contribution to the field of Automotive Transmission and Driveline Engineering, including his innovative

methods for optimum driveline synthesis, as well as his experience with the development of various hardware solutions, from the basic limited slip differentials to the most sophisticated mechatronic systems." –Dr.-Ing. Mircea Gradu Director, Transmission and Driveline Engineering Head, Virtual Analysis Tools Chrysler Group LLC Now that vehicles with four and more driving wheels are firmly ensconced in the consumer market, they must provide energy/fuel-saving benefits and improved operational quality including terrain mobility, traction and velocity properties, turnability, and stability of motion. A first-of-its-kind resource, Driveline Systems of Ground Vehicles: Theory and Design presents a comprehensive and analytical treatment of driveline research, design, and tests based on energy efficiency, vehicle dynamics, and operational properties requirements. This volume addresses fundamental engineering problems including how to investigate the effect of different driveline systems on the properties of vehicles and how to determine the optimal characteristics of the driveline system and its power-dividing units (PDUs) and design it for a specific vehicle to ensure high level of vehicle dynamics, energy efficiency, and performance. The authors develop an analytical apparatus for math modeling of driveline systems that can be compiled from different types of PDUs. They also introduce methodologies for the synthesis of optimal characteristics of PDUs for different types of vehicles. Structured to be

useful to engineers of all levels of experience, university professors and graduate students, the book is based on the R&D projects conducted by the authors. It explores intriguing engineering dilemmas such as how to achieve higher energy and fuel efficiency by driving either all the wheels or not all the wheels, solve oversteering issues by managing wheel power distribution, and many other technical problems.
