Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council 2015-09-28 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles,

will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Chemical Speciation in the Environment A. M. Ure
2008-04-15 Considerable recent research has focused on the topic of chemical speciation in the environment. It is increasingly realised that the distribution, mobility and biological availability of chemical elements depend not simply on their concentrations but, critically, on the forms in which they occur in natural systems. Continuing developments in analytical chemistry have made speciation practicable even where analytes are present at trace levels (as is often the case in natural samples). In the second edition of this book, the expertise of scientists involved in chemical speciation in various fields have been brought together to provide an overview of the current status of speciation science and indicate how the field may develop in the future.

Spacecraft Operations Thomas Uhlig 2014-08-20 The book describes the basic concepts of spaceflight operations, for both, human and unmanned missions. Techno-economic performance review of selected fishing fleets in North and South America Kitts, A., Van Anrooy, R., Van Eijs, S., Pino Shibata, J., Pallalever Pérez, R., Gonçalves, A.A., Ardini, G., Liese, C., Pan, M., Steiner, E. 2020-06-01 This techno-economic performance review of selected fishing fleets in North and South America presents the findings of four country level studies of fishing fleets in the United States of America, Brazil, Chile and Peru. The review includes financial and economic information of 21 fishing fleet segments, including shrimp and groundfish trawlers, demersal trawlers, longliners, purse seiners, dredgers as well as hook and line fishing vessels. Analysis of the costs and earnings data of these important fishing fleet segments in North and South America, using survey data from 2012 -2017 for the US fleet segments and 2018 data for the South American countries' fleets showed that 81 percent of the fleet segments had a positive net cash flow. The net profit margins of 38 percent of the 21 fishing fleet segments were >10%. Two-thirds (67%) of the fleet segments presented positive results in terms of their capital productivity as the return on fixed tangible assets (ROFTA) was positive. Twenty four percent of the fleet segments showed return on investment (ROI) figures of twenty percent or more. A majority of the Chilean and Peruvian fleet segments had ROIs of ten percent or higher in 2018. The financial and economic performance of the fishing fleet segments is not only affected by the seafood prices, but also by the fisheries management regime in place, fish species targeted, fish stock status and fishing methods and technologies applied. The age structure of the fishing vessels shows an increasing trend for most of the fishing fleet segments in this review, which adds to the apparent profitability of the vessels in these fleet segments as depreciation and interests on loans are minimized.

Porsche: 21st century 2002-2019 Karl E. Ludvigsen 2019

In Book 4 of *Porsche: Excellence Was Expected* Karl Ludvigsen recounts the dramatic events of 2008-09 that cast a deep shadow over what had been the world's most profitable car maker. Although Porsche became part of the VW Group, as a consequence of their maneuvers the Porsche and Piëch families achieved effective control of that vast corporation. Porsche's reaction to the financial ructions was to launch one great new car after another. Among them was the sensational 918 Spyder, the hypercar whose first appearance at Geneva in 2010 went a long way to show that Porsche was still Porsche. These were also the years of the creation and launch of the mid-engined Cayman coupe, which soon established a reputation as one of the world's best-handling sports cars. In 2016 Boxster and Cayman were joined at the hip under the "718" title, a tribute to the great sports-racers of the 1950s and 1960s that carried that project number. In 2009 Porsche introduced the Panamera, its most controversial offering since the Cayenne. Many of the Panamera's components were shared with the Cayenne, which received a major upgrade in 2017. Since the 2014 model year it had a cheeky little sister, the Leipzig-built Macan. Although derived from the Audi Q5, the Macan was a Porsche through and through. Also a fast seller, the Macan secured Porsche's financial future. Flying the all-important sports-car flag was the evergreen 911 Carrera, first with the 997 and then the 991. The 992 arrived as a 2020 model with all the bells and whistles needed to keep it at the top of its class. Although a hybrid variant of the 992 was not imminent, most of the production Porsches were taking advantage of the exploits of the 919 Hybrid. Starting in 2015, this brilliantly engineered LMP1 racer won the 24 Hours of Le Mans three years running, testifying to Porsche's competitiveness. On the horizon was the all-electric Taycan pointing the way to the legendary sports-car maker's future.

The Pesticide Detox Jules N. Pretty 2012-07-26 Since the 1960s, the world's population has more than doubled and agricultural production per person has increased by a third. Yet this growth in production has masked enormous hidden costs arising from widespread pesticide use - massive ecological damage and high incidences of farmer poisoning and chronic health effects. Whereas once the risks involved with pesticide use were judged to be outweighed by the potential benefits, increasingly the external costs of pesticides, to environments and human health, are being seen as unacceptable. In response to this trend, recent years have seen millions of farmers in communities around the world reduce their use of harmful pesticides and develop cheaper and safer alternatives. The Pesticide Detox explores the potential for the phasing-out of hazardous pesticides and the phasing-in of cost effective alternatives already available on the market. This book makes clear that it is time to start the pesticide detox and to move towards a more sustainable agriculture.
