*Understanding the Life Course* Lorraine Green 2016-12-20 Understanding the Life Course provides a uniquely comprehensive guide to the entire life course from an interdisciplinary perspective. Combining important insights from sociology and psychology, the book presents the concept's theoretical underpinnings in an accessible style, supported by real-life examples. From birth and becoming a parent, to death and grieving for the loss of others, Lorraine Green explores all stages of the life course through key research studies and theories, in conjunction with issues of social inequality and critical examination of lay viewpoints. She highlights the many ways the life course can be interpreted, including themes of linearity and multidirectionality, continuity and discontinuity, and the interplay between nature and nurture. The second edition updates key data and includes additional material on topics such as new technologies, changing markers of transitions to adulthood, active ageing, resilience and neuropsychology. This comprehensive approach will continue to be essential reading for students on vocational programmes such as social work and nursing, and will provide thought-provoking insight into the wider contexts of the life course for students of psychology and sociology.

*An Educational Psychology Textbook* Equity 2014-10-10 The first half of the book focuses on broader questions and principles taken from psychology per se, and the second half focuses on somewhat more practical issues of teaching. All parts of the book draw on research, theory, and practical wisdom wherever appropriate. Chapter 2 is about learning theory, and Chapter 3 is about development. Chapter 4 is about several forms of student diversity, and Chapter 5 is about students with disabilities. Chapter 6 is about motivation. Following these somewhat more basic psychological chapters, we turn to several lasting challenges of classroom life--challenges that seem to be an intrinsic part of the job. Chapter 7 offers ideas about classroom management; Chapter 8, ideas about communicating with students; Chapter 9, about ways to assist students' complex forms of thinking; and Chapter 10, about planning instruction systematically. The book closes with two chapters about assessment of learning.

*Concepts and Theories of Human Development* Richard M. Lerner 2013-05-13 A classic in the field, this third edition will continue to be the book of choice for advanced undergraduate and graduate-level courses in theories of human development in departments of psychology and human development. This volume has been substantially revised with an eye toward supporting applied developmental science and the developmental systems perspectives. Since the publication of the second edition, developmental systems theories have taken center stage in contemporary developmental science and have provided compelling alternatives to reductionist theoretical accounts having either a nature or nurture emphasis. As a consequence, a developmental systems orientation frames the presentation in this edition. This new edition has been expanded substantially in comparison to the second edition. Special features include: \* A separate chapter focuses on the historical roots of concepts and theories of human development, on philosophical models of development, and on developmental contextualism. \* Two new chapters surrounding the discussion of developmental contextualism--one on developmental systems theories wherein several exemplars of such models are discussed and a corresponding chapter wherein key instances of such theories--life span, life course, bioecological, and action theoretical ones--are presented. \* A new chapter on cognition and development is included, contrasting systems' approaches to cognitive development with neo-nativist perspectives. \* A more differentiated treatment of nature-oriented theories of development is provided. There are separate chapters on behavior genetics, the controversy surrounding the study of the heritability of intelligence, work on the instinctual theory of Konrad Lorenz, and a new chapter on sociobiology. \* A new chapter concentrates on applied developmental science.
