The Crisis of Global Environmental Governance Jacob Park 2008-03-27 More than twenty years after the Bruntland Commission report, Our Common Future, we have yet to secure the basis for a serious approach to global environmental governance. The failed 2002 World Summit on Sustainable Development showed the need for a new approach to globalization and sustainability. Taking a critical perspective, rooted in political economy, regulation theory, and post-sovereign international relations, this book explores questions concerning the governance of environmental sustainability in a globalizing economy. With contributions from leading international scholars, the book offers a comprehensive framework on globalization, governance, and sustainability, and examines institutional mechanisms and arrangements to achieve sustainable environmental governance. It: considers current failures in the framework of global environmental governance addresses the problematic relationship between sustainability and globalization explores controversies of development and environment that have led to new processes of institution building examines the marketization of environmental policy-making; stakeholder politics and environmental policy-making; socio-economic justice; the political origins of sustainable consumption; the role of transnational actors; and processes of multi-level global governance. This book will be of interest to students and researchers of political science, international studies, political economy and environmental studies.

Governance for Sustainable Development Rosalie Callway 2013-06-17 As the process of globalization continues and power imbalances between decision-making institutions become increasingly apparent, the need for a critical assessment of the way in which we manage our interaction with the natural environment becomes ever more urgent. Good governance was identified at the World Summit on Sustainable Development as a critical factor for ensuring successful sustainable development. This book builds on the briefing papers that were presented at the Summit, taking further the discussions of the WEHAB agenda (Water, Energy, Health, Agriculture and food, and Biodiversity - the five international priority sectors highlighted by UN Secretary General Kofi Annan). This is a unique offering on the role and reform of global institutions and processes, raising issues that have previously been neglected in international discussions.

The Making of International Environmental Treaties Gerry Nagtzaam 2009 Gerry Nagtzaam contends that in recent decades neoliberal institutionalist scholarship on global environmental regimes has burgeoned, as has constructivist scholarship on the key role played by norms in international politics. In this innovative volume, the author sets these interest- and norm-based approaches against each other in order to test their ability to illustrate why and how different environmental norms take hold in some regimes and not others. The book explores why some global environmental treaties seek to preserve and protect some parts of nature from human utilization, some seek to conserve certain parts of nature for human development, whilst others allow the reckless exploitation of nature without accounting for the consequences. It tracks the fate of these three underlying environmental norms preservation, conservation and exploitation using case studies

on whaling, mining in Antarctica and tropical timber. The book illustrates how international political battles to shape environmental regimes inevitably result in clashes between these competing environmental norms. This unique study will prove a fascinating read for both academics and practitioners in the fields of international environmental politics and international environmental law.

The Globalization of Environmental Crisis Jan Oosthoek 2013-10-31 Previously published as a special issue of Globalizations, this collection of essays addresses what is arguably the most pressing and urgent issue of our day - the continuing development of global environmental crises and the need for new and urgent responses to them by the world community. The contributors include social scientists, environmental historians, anthropologists, and science policy researchers, and together they give an overview of the history of the globalization of environmental crisis over the past several decades, both in terms of the science of measurement and the types of policy and public responses that have emerged to date. The specific issue areas addressed in the book cover a wide range of topics, including international environmental governance, North-South inequalities, climate change, global warming, tropical forests, air pollution, economic and paradigm shifts, sustainability, indigenous peoples and eco-conservation, EU environmental policy, the United States and politicized climate science, and more. The Globalization of Environmental Crisis will be of particular interest to all those concerned with the on-going debate over the state of the global environment and what to do about it.

Sustainable Development in World Trade Law Markus W. Gehring 2005-01-01 In Johannesburg at the World Summit on Sustainable Development in 2002, over one hundred and eighty states assumed a collective responsibility to advance and strengthen the interdependent and mutually reinforcing pillars of sustainable development economic development, social development, an environmental protection at the local, national, regional and global levels. This remarkable collection of papers, sponsored by the Centre for International Sustainable Development Law (CISDL), demonstrates that sustainable development serves as a unifying concept

with the potential to facilitate much-needed respect for international law and timely implementation of diverse and overlapping international commitments. It builds on the substance of a rich and complex debate at the intersections among economic, social, and environmental law, bringing together a broad cross-section of viewpoints and voices. The authors review recent developments in WTO discussions and negotiations, and in the recent decisions of the WTO Appellate Body, from a sustainable development law perspective. They also survey relevant new developments in trade and economic agreements at regional, inter-regional and bi-lateral levels. The various essays focus on sustainable development aspects of key issues in recent trade negotiations such as the Singapore Issues (investment, competition, trade facilitation, and government procurement), intellectual property rights, investment arbitration and the linkage between the WTO and multilateral environmental accords, (MEAand;s).. Among the specific topics covered are the following: Emerging areas of law and policy in trade and sustainable development, The underlying development agendas in global trade law negotiations, Cooperation and potential negotiation on international competition law, Sustainable development aspects of intellectual property rights negotiations, Overlaps between multilateral environmental accords (MEAand;s) and the WTO, Recent developments in WTO dispute settlement procedures and proceedings, Human rights and environmental opportunities from trade liberalisation and increased market acces, Human rights and environment impact assessment techniques used to analyse trade agreements, Recent developments in bi-lateral and regional trade agreements. Trade, investment, and competition law practitioners and negotiators in developed and developing countries will find this book of great value, as will development and environment law professionals with responsibility for trade and WTO law related matters. With rich contributions from leading trade law practitioners, academics, and WTO panel and appellate body roster members, Sustainable Developments in World Trade Law offers a constructive, timely and accessible expert analysis of recent discussions and advances in the field, providing an integrated and essential guide to some of the most important issues in international economic law today.

International Environmental Law Gerry Nagtzaam 2019-11-12 This book seeks to better understand how International Environmental Law regimes evolve. The authors address throughout the major environmental, economic, and political tensions that have both shaped and constrained the evolution of international environmental policy within regimes, and its expression in international legal rule and norm development. Readers will gain an increased understanding of the growing role played by non-state actors in global environmental governance, including environmental non-government organisations, scientists, the United Nations, and corporations. The authors also look ahead to the future of International Environmental Law, evaluating key challenges and decisions that the discipline will face. The text is clear, concise, and accessible. It is ideally suited to students and professionals interested in International Environmental Law, and individuals who are intrigued by this dynamic area of law.

The Global Commons John Vogler 2000-06-22 This new and updated edition is essential for those wanting to understand the limits to collective action on global environmental problems. It develops and applies the tools of regime analysis to the question of how the various global commons are, or fail to be, governed effectively. Since the publication of the first edition of *The Global Commons* there have been many developments particularly in the area of climate change and sustainable development e.g. Agenda 21. This new edition has been extensively re-written and expanded to take into account recent developments and includes new conclusions on the connections between global and local commons. Involving the first systematic comparative analysis of governance regimes, the book covers: * The Third Law of the Sea Convention, the deep seabed, whaling and marine pollution regimes * Antarctica and the Madrid Protocol on Environmental Protection * Outer space regimes for weapons, the operation of satellites and the emerging problem of orbital debris * The global atmosphere, the Montreal Protocol for the protection of the stratospheric ozone layer and the developing climate change regime and the Kyoto Protocol. The first edition received widespread praise eg "a comprehensive and incisive review of much relevant scholarship and case study material" (Area) and "a must for every reading list" (Progress in Human Geography) and this latest volume will also be invaluable for researchers and students of politics, environmental management, international relations and political geography.

Global Justice and Neoliberal Environmental Governance Chukwumerije Okereke 2007-09-03 "With specific focus on three environmental regimes, this book explores the way that various notions of justice feature both implicitly and explicitly in the design of global environmental policies. In so doing, the dominant conceptions of justice that underpin these policies are identified and, in turn, criticised on the basis of their compatibility with the normative essence of global sustainable development. The book demonstrates that, although moral norms have a far greater impact on regime development than is currently acknowledged, the core policies for the most part remain rooted in two neoliberal interpretations of justice, both of which undermine the ability to achieve sustainable development and international justice."--BOOK JACKET.

The A to Z of Environmentalism Peter Dauvergne 2009-09-02 Environmentalism involves hundreds of international environmental groups, thousands of national groups, and tens of thousands of local ones. It also includes hundreds of international agreements, hundreds of national environmental agencies, and countless environmental sections in other organizations—from those in multinational corporations to ones in regional and international organizations. Such environmental concepts as sustainable development, the precautionary principle, corporate social responsibility, and eco-labeling percolate from all of

these sources. Every year, new ideas, refinements, policies, institutions, markets, and problems continue to enter into environmental debates and discourses, making it nearly impossible to keep abreast of the changes constantly taking place. The A to Z of Environmentalism is a paperback edition of the Historical Dictionary of Environmentalism. It strategically skips across issues, concepts, time, organizations, and cultures, not with any pretense of producing a definitive dictionary but rather with the aim of producing an inclusive, wide-ranging, and global history of environmentalism. This goal is accomplished through a chronology, an introductory essay, and over 300 cross-referenced dictionary entries.

Chinese Perspectives on Global Governance and China 2021-10-25 The acceleration of globalization and the rise of China are among the most important events in the 21st century. Globalization is a double-edged sword for human society. There is a strong belief among the international community that global governance is the most effective solution to most of our global problems. In this volume Chinese scholars contribute to the study of global governance by exploring ways to effectively face the tough challenges brought by globalization, such as economic prosperity, environmental issues, and global security.

The Global Politics of the Environment Lorraine Elliott 2004-08-01 Human activity is changing the global environment on a scale unlike that of any other era. Environmental deterioration is now a global issue—ecologically, politically, and economically—that requires global solutions. Yet there is considerable disagreement over what kinds of strategies we should adopt in order to halt and reverse damage to the global ecosystem. What kinds of international institutions are best suited to dealing with global environmental problems? Why are women and indigenous peoples still marginalized in global environmental politics? What are the consequences of the global ecological crisis for economic and security policies? The Global Politics of the Environment makes sense of the often seemingly irreconcilable answers to these questions. It focuses throughout on the tensions between mainstream strategies, which seek to build support for reforms through existing institutions, and radical critiques, which argue that environmental degradation is a symptom of a dysfunctional world order that must itself be transformed if we are to meet the challenge of saving the planet.

HD of Environmentalism Gary Bryner The Historical Dictionary of Environmentalism strategically skips across issues, concepts, time, organizations, and cultures, not with any pretense of producing a definitive dictionary but rather with the aim of producing an inclusive, wide-ranging, and global history of environmentalism. This is done through a chronology, a list of acronyms and abbreviations, an introductory essay, and over 300 cross-referenced dictionary entries.

It concludes by arguing for a democratization of global governance and a fundamental restructuring of the regulatory environment so that final decision making authority is restored to the local level. Driven by concern at what forest loss means for communities and future generations, this is a book that stands to make a difference.

Great Powers, Climate Change, and Global Environmental Responsibilities Robert Falkner 2022-01-10 This book is the first of its kind to examine the role of great powers in the international politics of climate change. It develops a novel analytical framework for studying environmental power in international relations, what counts as a great power in the environmental field, and what their special environmental responsibilities are. In doing so, the book connects International Relations (IR) debates on power inequality, great powers and great power management, with global environmental politics (GEP) scholarship. The book brings together leading scholars in IR and GEP whose contributions focus on major environmental powers (United States, China, European Union, India, Brazil, Russia) and international institutions and issue areas (UN Security Council, multilateral environmental agreements, international climate leadership, coal politics). The contributors to this volume examine how individual great powers have responded to the global climate challenge and whether they have accepted a special responsibility for stabilizing the global climate. They place emerging discourses on great power responsibility in the context of wider debates about international environmental leadership and climate change securitization. And they provide new

insights into how international power inequality intersects with the global ecological crisis, and what special role great powers could and should play in the international fight against global warming.
